

Project Overview

This report presents a thorough analysis of the Nepal Election Results 2082 (2026). The primary objectives of this analysis were to evaluate candidate demographics, compare political party performances, examine voter turnout across various constituencies, and explore relationships between candidate characteristics and electoral outcomes.

Data Methodology

Data wrangling was a crucial step in this analysis, requiring the collection of data in multiple formats from various sources. The methodologies utilized include:

- **JSON Integration:** Sourced candidates, parties, and constituency data from *nepalvotes.live/ candidates* and missing candidate age data from *result.election.gov.np/*.
- **AI Assistance:** Utilized ChatGPT to extract and validate constituency coordinates in CSV format.
- **Web Scraping:** Extracted image data, such as candidate photos and party symbols, directly from the election commission website.

Key Electoral Insights

TOTAL VOTES CAST

10,559,017

OVERALL TURNOUT

55.9%

YOUTH PARTICIPATION

31.0%

FEMALE CANDIDATES

11.4%

Candidate Demographics

The candidate demographic displays a significant gender disparity, with 88.6% of candidates being male and 11.4% being female. The age distribution follows a roughly normal curve centered around 40 to 50 years of age. Furthermore, a significant 31.0% of the individuals involved in the election were classified as youth.

An analysis of educational backgrounds reveals that higher qualifications correlate with voter confidence; candidates holding a Master's Degree or a Doctorate/PhD acquired the highest average votes.

Political Party Performance

The **Rastriya Swatantra Party (RSP)** demonstrated overwhelming dominance in this election cycle. RSP captured 75.8% of the winning count, securing 125 total wins and an impressive 44.33% total vote share.

RANK	PARTY NAME	WIN SHARE (%)
1	Rastriya Swatantra Party	75.8%
2	Nepali Congress	10.9%
3	CPN-UML	5.5%
4	Nepali Communist Party	4.8%
5	Shram Sanskriti Party	1.8%

Note: While "Swatantra" (Independent) represented the highest frequency of candidates fielded in the dataset, the Rastriya Swatantra Party dominated the actual election victories.

Constituency Analysis

Voter Abstention Trends

While the overall turnout was 55.9%, several constituencies experienced remarkably high voter abstention rates. Below are the top ten constituencies with the highest rates of voter abstention:

CONSTITUENCY	ABSTENTION RATE (%)
Rukum East-1	82.9%
Achham-1	63.2%
Achham-2	63.1%
Doti-1	61.7%
Khotang-1	60.0%
Manang-1	58.9%
Udayapur-2	57.6%
Bhojpur-1	57.3%
Bajhang-1	56.8%
Baitadi-1	56.7%

Candidate Spotlight & Top Winners

An interactive dashboard allowed for a granular look at individual performances. The top 3 winning candidates by vote count are:

- Balendra Shah:** Rastriya Swatantra Party | Jhapa-5 | 68,348 votes
- Indira Rana Magar:** Rastriya Swatantra Party | Jhapa-2 | 60,110 votes

3. **Sobita Gautam:** Rastriya Swatantra Party | Chitwan-3 | 59,277 votes

Profile: Balendra Shah (Top Candidate)

Balendra Shah, a 36-year-old male candidate representing the Rastriya Swatantra Party, achieved a decisive victory in the Jhapa-5 constituency for the House of Representatives. He secured a total of 68,348 votes, capturing 66.79% of the vote share in his area. His primary rival, KP Sharma Oli (CPN-UML), placed second with 18,734 votes.

Study Limitations

It is important to acknowledge that electoral outcomes are shaped by a complex web of external factors. Elements such as candidate popularity, social influence, voter relationships, and party-level campaign strategies are not inherently captured within this dataset. Consequently, the analysis relies heavily on indirect indicators—like qualifications and residential backgrounds—which limits the complete understanding of candidate profiles and the driving forces behind the electoral patterns observed.
